

U.S. Route 54 at Linn Creek Intersection Improvements

Purpose of Today's Meeting

Welcome!

Today's public meeting will help you learn more about some intersection improvements proposed by the Missouri Department of Transportation.

MoDOT proposes to make improvements along U.S. Route 54 at the intersections of Route V and at Business Park Road/East Valley Drive.

The improvements are designed to reduce the number and severity of crashes occurring at both locations as motorists enter and exit Route 54.

To improve site distance for motorists exiting Route 54, turn lanes will be constructed within the highway median at both intersections.

The existing intersection of Business Park Road/East Valley Drive will also be reconfigured to reduce the number of turns at this busy intersection.

Vehicles on Route 54 will still be able to exit at the existing Business Park Road/East Valley Drive. To enter Route 54 from Business Park Road, motorists will use a separate entrance constructed just east of the existing intersection.

Your comments are extremely important. As you move through the displays, please share your questions and ideas with MoDOT representatives.
